3D panels / concrete tiles / stone cladding / brick slips

3D PANELS

The 3D panels' collection allows you to create a 3D geometric feature without sanding joints, which means they are very quick and simple to install using an adhesive. 3D panels are made of natural casting plaster, an environmentally friendly and fire-resistant material. Gypsum 3D panels come in their natural colour – white but they can be painted with standard emulsion paint to any colour, after or before fitting.

CONCRETE TILES

Concrete tiles designs can produce minimalist and industrial effects evoking a raw and modernist feel to any interior. Architectural concrete is a hard-wearing, fire- and frost-resistant material that lends itself beautifully to a modernist industrial feel for both interiors and exteriors. Concrete tiles are handcrafted using GRC (Glass-fibre Reinforced Concrete) technology and made of best quality cement and fibres. They have a 4i attribution rating which is the highest in concrete products range, making it a very tough material and perfectly suited for a surface covering purposes. This versatile material can be dyed in base too many colours, from white to graphite, enabling it to be used in both domestic and commercial environments.

This versatile material is made from real concrete and reinforced with industrial fibreglass, enabling it to be used in home and commercial environments. It has a 4i Attribution Rating which is the highest in class, making it a very tough material, perfectly suited for decorative purposes. Made from Glass fibre Reinforced Concrete, (GRC) is a significant contributor to the aesthetics of the construction industry worldwide. Being an environmentally friendly composite, with its low consumption of energy and natural raw materials, it is fast becoming a trigger for innovative designers, architects and engineers. Depending upon performance requirements, a range of matrix modifiers such as acrylic polymers, rapid set cement and additives to improve the long-term stability of the material.

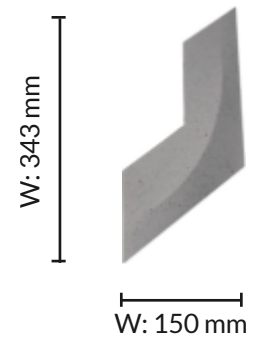

This highly flexible material can be used both internally and externally and can be integrated into stunning and visually complex bathroom designs, flooring and even furniture. Using standard tile adhesive, GRC offers easy to find panels for your designs. With a diverse project range, spanning a wide variety of sectors including hospitality, retail, residential interior design, architectural work and commercial building work, we work alongside interior designers, builders, architects and other industry professionals to bring ideas to life.

STONE CLADDING

Stone cladding is a fantastic decorative product, ascetically identical to natural stones and bricks. It is a strong and versatile solution popular in North America, which works well in the harshest conditions. For example, on a chimney breast, where the stones are exposed to very high temperatures or on external walls, in contact with rain, frost and sunlight.

Concrete stone cladding can be easily cut with an angle grinder and fixed with tile adhesive. Stone tiles have pre-designed corner sets, they make pillars or any other corners in your property look perfect, without joints on edge, with no need for 45 degrees cutting...

BRICK SLIPS

Brick slips are made of concrete or from the front of the original clay brick. They can be used both internally and externally, or are the perfect accessory for bathrooms and kitchens. Bricks slips can be easily cut with an angle grinder and fixed with tile adhesive. Brick tiles have pre-designed corner sets, they make pillars or any other corners in your property look perfect, with no need for 45 degrees cutting.

Reclaimed bricks tiles are rescued from original clay bricks, cleaned up and packed, and ready to use again. Original bricks have cracks, discolouration and old mortar marks. They also come in irregular sizes. All this, and more, adds to their warm charm and cosy character.

With a genuinely matured & acquired natural character built up from years of wear, reclaimed brick tiles offer the authentic look of an original exposed brick wall. The individuality of every brick ensures your project is truly unique.
